

Environmental Product Declaration

In accordance with ISO 14025:2006 and EN 15804:2012+A2:2019/AC:2021 for:

Flake-Based Decorative Coating / Paint

From
Valpaint S.p.a.

Products included:

- ARTECO' 7.
- ARTECO' 7 METAL
- KLONDIKE
- KLONDIKE LIGHT
- C100 OVER

This is an EPD of a multiple-products series, based on a representative product.

The EPD owner has the sole ownership, liability, and responsibility for the EPD.

EPDs within the same product category but published in different EPD programmes, may not be comparable. For two EPDs to be comparable, they shall be based on the same PCR (including the same first-digit version number) or be based on fully aligned PCRs or versions of PCRs; cover products with identical functions, technical performances and use (e.g. identical declared/functional units); have identical scope in terms of included life-cycle stages (unless the excluded life-cycle stage is demonstrated to be insignificant); apply identical impact assessment methods (including the same version of characterisation factors); and be valid at the time of comparison.

For further information about comparability, see EN 15804 and ISO 14025

INFORMATION ABOUT EPD OWNER

Owner of the EPD: Valpaint S.p.A.

Address: Via dell'Industria, 80, 60020 Polverigi (Ancona – Italy)

Contact: Mirco Cesaretti - VALPAINT S.p.A. mirco.cesaretti@valpaint.it

Address and contact information of the LCA practitioner commissioned by the EPD owner:

Dr. Alessandra Cecchini - Manifaktura S.r.l. – Str. della Campanara 3/1 - 61122 Pesaro Italy.

Description of the organisation:

VALPAINT was officially established in 1988 and became a joint-stock company (S.p.A.) in 2004. Its origins date back to 1974 when Ferdinando Sarti, still the company's President, started a small business in the paint sector.

VALPAINT TUNISIE is the production subsidiary located in Zaghouan, 70 km from Tunis, where the same decorative paints have been produced for the North African markets with the same technical specifications and the same quality level since 2001.

The VALPAINT brand is operates in many countries in Europe and around the world, either with its own subsidiaries or companies belonging to the Group:

VALPAINT ESPAÑA S.L. - Burgos (Spain)

VALPAINT DESIGN D.O.O.:

- Sarajevo (Bosnia Herzegovina)
- Podgorica (Montenegro)
- Zagreb (Croatia)

70% of turnover abroad; exports to over 60 countries; over 800 dealers and distributors/importers in Italy and worldwide.

VALPAINT is considered one of the most technologically advanced industries thanks to the dynamic activity of its Research and Development Laboratory.

The product development process takes advantage of the most advanced scientific methods to offer consumers the very best in **QUALITY** and **PERFORMANCE**.

At VALPAINT, R&D activities are driven by a desire for continuous improvement.

In 2006 we obtained the ISO 9001 Quality certification, which was followed by the ISO 14001 environmental certification for our environmentally friendly production processes in 2009.

But there is more:

- With VALPAINT's industrial water purifier the waste of water resources is reduced and only purification sludge is disposed of in landfills. Purified water is used in our washing plant, significantly reducing the amount of water taken from the water mains;
- since 2019 we have increased the energy efficiency of our plant with the installation of a photovoltaic system.
- VALPAINT cans are Plastic Second Life certified, as at least 40% of the plastic used is recycled, traced, and complies with the quality requirements established by the Italian Institute of Plastics (IIP).
- VALPAINT catalogs and product labels are made from FSC paper. FSC paper is certified by the Forest Stewardship Council, an international non-governmental organization that promotes responsible forest management worldwide. The FSC certification guarantees that the paper is produced from sustainably managed forests, respecting the environment, local communities, and workers' rights;
- the inks used by our suppliers for printing VALPAINT catalogs are plant-based to ensure a more sustainable future.

VALPAINT has embarked on an innovative and sustainable initiative by collaborating with a startup focused on protecting bees through the use of technology. The goal of the project is to promote environmental sustainability and raise public awareness about the importance of bees for the ecosystem. The project is part of VALPAINT's broader commitment to sustainable and environmentally friendly business practices.

VALPAINT produces a wide range of decorative paints that respect the environment and human health, both in the liquid phase (chemical analyses performed on paints in liquid state) and in terms of indoor emissions.

The vast majority of VALPAINT products:

- are certified in class A+ according to French Decree No. 2011-321
- are awarded the Japanese Four Star certification for formaldehyde emissions measured according to the strict JJS A 1902-3 standard.
- have a low VOC (volatile organic compounds) contents
- comply with the strict German AgBB/ABG and Blue Angel standards, as only raw materials that allow this result to be achieved are selected during the development phase.
- do not contain polycyclic aromatic hydrocarbons (PAHs), alkylphenol ethoxylates (APEOs), ammonia, formaldehyde, or heavy metals to ensure maximum safety for users and the environment.
- are not classified as toxic according to Regulation (EC) 1272/2008 (CLP).

Renewable raw materials come from plants rather than fossil sources, and recycled raw materials help to close the life cycle of a substance: the waste product of a specific sector becomes the raw material for another activity.

The company is a model of excellence in the decorative paint sector, demonstrating how innovation and sustainability can go hand in hand. Our goal is to become completely sustainable; to this end, we invest in innovative technologies and collaborate with suppliers committed to reducing their environmental impact.

With its green products and constant commitment to sustainable production practices, VALPAINT offers high-quality decorative solutions, while contributing to protecting the planet.

Product-related or management system-related certifications:

- ISO 9001
- ISO 140001

PRODUCT INFORMATION

Product name: **Flake-Based Decorative Coating / Paint**

Product identification:

The EPD hereby refers to a range of water based Flake-Based Decorative Coating paints for interiors with different visual effects (antique, pearlescent, antique metallic, cement).

The complete list and the description is show in the table below:

| Product | Size | Density | yield (m ² /lt) |
|---|--|-----------|----------------------------|
| ARTECO' 7 (representative product) | <ul style="list-style-type: none"> • 1 L • 2,5 L | 1.02 kg/l | 7 |
| | | 1.10 kg/l | 8 |
| ARTECO' 7 METAL | <ul style="list-style-type: none"> • 4 L • 5 L • 12 L | 1.02 kg/l | 4 |
| KLONDIKE | | 1.01 kg/l | 5 |
| KLONDIKE LIGHT | | 1.02 kg/l | 4 |
| C100 OVER | | | |

UN CPC code:

35110 Paints and varnishes and related products

Product description:

ARTECO' 7 (representative product):

Versatile and visually water-based paint for indoor use (yield 7-8 m²/lt), able to create antique effects on finishing surfaces.

The product has the highest sales, therefore is considered representative for all Flake-Based Decorative Coating / Paint.

ARTECO' 7 METAL:

Water based paint for indoor use (yield 8-10 m²/lt), with pearlescent and satined effect due to iron oxide pigmentation on painting composition

KLONDIKE:

Water-based interior coating for antique metallic effects (yield 4-5 m²/lt); the luminescent effect results from forged metal fragments incorporated in the paint

KLONDIKE LIGHT:

Water-based interior coating for antique metallic effects (yield 5-6 m²/lt); the luminescent effect results from forged metal fragments incorporated in the paint

The slightly different metallic composition gives a brighter visual effect compared to KLONDIKE.

C-100 OVER:

Water-based interior coating (yield 4-5 m²/lt) to reply, due to a specific metal oxide composition, the visual effect of the cement.

All products in the Flake-Based Decorative Coating / Paint family are available in packaging sizes of **1, 2.5, 4, 5 and 12 litres**. However, the representative product studied in this EPD is **1 kg of ARTECÒ 7**, which is used as the declared unit for the life-cycle assessment.

Name and location of production site(s):

VALPAINT S.p.A. - Via dell'industria, 80 - 60020 Polverigi (AN) - ITALY

Producer website: <https://www.valpaint.it/>

CONTENT DECLARATION

The mass (weight) of one unit of a product, as purchased or per declared unit:

1 kg of Flake-Based Decorative Coating / Paint decorative paint (Artecò 7), manufactured by Valpaint S.p.A.

Content of the product (see Table below):

| Product content Arteco' 7 | Mass [Kg] Arteco' 7 | Post-consumer recycled material, mass- % of product | Biogenic material, mass- % of product | Biogenic material, kg C/product or declared unit |
|--------------------------------|------------------------|--|---|--|
| Water | 0.827 | 0 | 0 | 0 |
| Dispersions and resins | 0.091 | 0 | 0 | 0 |
| Fillers | 0.014 | 0 | 0 | 0 |
| Pigments | 0.035 | 0 | 0 | 0 |
| Solvents | 0.008 | 0 | 0 | 0 |
| Salts and simple substances | 0.002 | 0 | 0 | 0 |
| Additives | 0.023 | 0 | 0 | 0 |
| TOTALE | 1.000 | 0 | 0 | 0 |

The 2.5-liter bucket is the company's best-selling packaging format and is therefore used as the reference unit in this EPD.

| Packaging materials | Mass, kg | Mass-% (versus the product) | Biogenic material, kg C/product or declared unit |
|-------------------------------|---------------|--------------------------------|---|
| Corrugated board | 0.0180 | 1.80 | 0.009 |
| Packaging film | 0.0045 | 0.45 | 0.000 |
| Recycled plastic paint bucket | 0.0860 | 8.60 | 0.000 |
| EUR-flat pallet | 0.0238 | 2.38 | 0.0119 |
| TOTAL | 0.1323 | 13.23% | 0.0128 |

1 kg biogenic carbon in the product/packaging is equivalent to the uptake of 44/12 kg of CO₂.

Other information on substances with hazardous and toxic properties:

Preservatives (CIT/MIT, BIT) are present in concentrations below 0.1% w/w, in compliance with EU biocidal products regulation. No other hazardous substances are present in significant concentrations.

LCA INFORMATION

Declared unit: 1 kg of *Flake-Based Decorative Coating / Paint Arteco' 7* manufactured by Valpaint. This EPD covers multiple products with results based on a representative product from the Valpaint family of Flake-Based Decorative Coating / Paint

Product Representativeness:

The representative product is ARTECO' 7 which is the one with the highest production volume compared to product line. .

Conversion factor to mass if mass is not used as functional/declared unit: 1 Kg = 0.98 L = 6,86 m²

Reference service life: RSL is not relevant for this EPD

Time representativeness: Primary, site-specific data were collected at VALPAINT's manufacturing site and cover the period 01/01/2024–31/12/2024.

Geographical scope: The geographical scope of this EPD is Global

Database(s) and LCA software used: The Life Cycle Assessment was modelled in SimaPro (v10.2.0.3 Analyst). Background data were sourced from Ecoinvent (v3.11) for environmental performance indicators:15804 + A2 based on EF 3.1 characterisation factor

Description of system boundaries:

Cradle-to-gate (A1-A3)

Declared modules:

- A1 Raw material supply: extraction, production and supply of raw materials, including upstream processes and precursors used in the formulation of Artecò 7.
- A2 Transport: average transport of raw materials to the Valpaint production plant, modelled with weighted average distances and vehicle classes based on supplier data.
- A3 Manufacturing: mixing and dispersion of raw materials, use of auxiliaries (additives, dispersants, thickeners, preservatives), electricity and process water, packaging operations, on-site emissions to air and water, and waste management. Quality control operations are included.

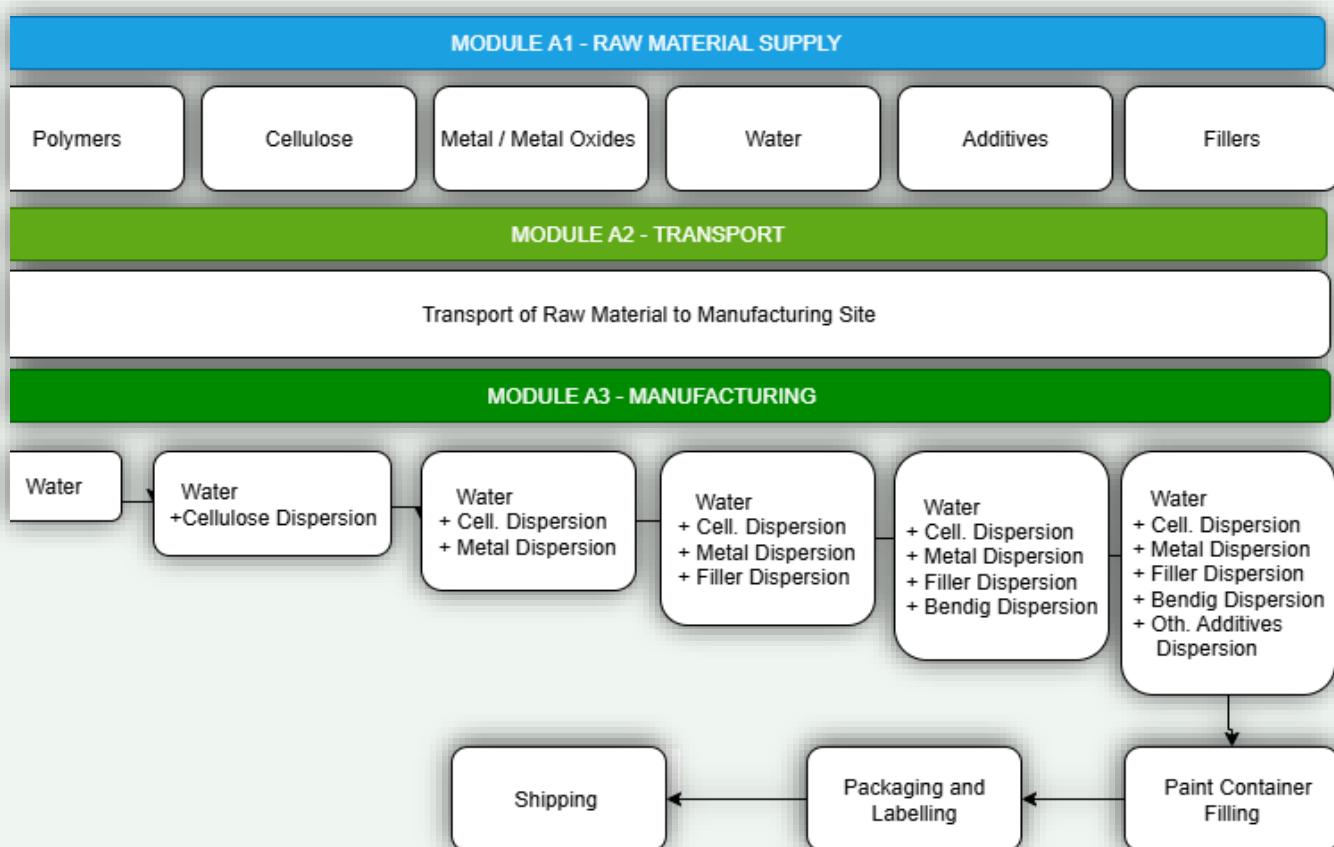

As permitted by PCR 2019:14 Construction products, version 2.0.1, the remaining life cycle stages (modules A4–A5, B1–B7, C1–C4, and D) have been excluded from the study, as the analyzed products meet the following conditions:

- The product or material is physically integrated with other products during installation and therefore cannot be physically separated from them at the end of life;
- The product or material is no longer identifiable at the end of life due to a physical or chemical transformation process;
- The product or material does not contain biogenic carbon;
- The EPD is not intended for business-to-consumer communication.

* Electricity mix: The electricity used in the production process (phase A1-A3) was modelled using the national Residual Mix provided by the AIB (Association of Issuing Bodies) for a share of 94.5%, and by the photovoltaic system for 5.5%. The GWP-GHG of the electricity mix is equal to: **0.61** kg CO2eq./kWh

Cut-off: coverage ≥99% of mass and energy;

Process flow diagram:

| | Product stage | | | Distribution/ installation stage | | Use stage | | | | | | End-of-life stage | | | | Beyond product life cycle | |
|-----------------------|---------------------|-----------|---------------|----------------------------------|---------------------------|-----------|-------------|--------|-------------|---------------|------------------------|-----------------------|----------------------------|-----------|------------------|---------------------------|------------------------------------|

Data source and representativeness:

A summary of the data quality assessment, in line with requirements of PCR in Section 4.6.4. is listed below. The share of primary data is calculated based on GWP-GHG results.

The EPD covers the *Flake-Based Decorative Coating / Paint* from Valpaint factory in Polverigi Marche, Italy, which provided data for the period 2024-01-01 to 2024-12-31. The product is manufactured through a complete paint manufacturing process, including mixing and packaging.

Background data was sourced from the Ecoinvent 3.11. The data quality assessment is based on EN15804 Annex E Table E-1. In general, time representation of the dataset's selection is very good for the studied product, the technical representation is good, the geographical representation is good.

No poor or very poor data was found during the assessment of relevant data.

| Process | Source type | Source | Reference year | Data category | Share of primary data, of GWP-GHG results for A1-A3 |
|--|-------------------------|--------------------------|----------------|----------------|---|
| Generation of electricity used in manufacturing of product | Collected data Database | Valpaint Ecoinvent v3.11 | 2024 | PrimaryData | 10.24 % |
| transport of raw materials to plant | Collected data Database | Valpaint Ecoinvent v3.11 | 2024 | Primary data | 3.52% |
| Packaging (LDPE, cardboard, pallet, film) | Collected data Database | Valpaint Ecoinvent v3.11 | 2024 | Primary data | 7.18% |
| Raw materials (binders, fillers, TiO ₂ , additives) | Collected data Database | Valpaint Ecoinvent v3.11 | 2024 | Secondary data | 0% |
| Total share of primary data, of GWP-GHG results for A1-A3 | | | | | 20,94% |

ENVIRONMENTAL PERFORMANCE

LCA results of the product(s) - main environmental performance results

Mandatory impact category indicators according to EN 15804 (Representative Product)

| Results for 1 Kg of declared unit | | |
|-----------------------------------|---|-----------|
| Indicator | Unit | A1-A3 |
| GWP-total | kg CO ₂ eq | 6,58E-01 |
| GWP-biogenic | kg CO ₂ eq | -1,19E-02 |
| GWP-fossil | kg CO ₂ eq | 6.67E-01 |
| GWP-luluc | kg CO ₂ eq | 2.89E-03 |
| ODP | kg CFC11 eq | 1.46E-08 |
| AP | mol H ⁺ eq | 6.92E-03 |
| EP-freshwater | kg P eq | 2.09E-04 |
| EP-marine | kg N eq | 6.46E-04 |
| EP-terrestrial | mol N eq | 6.09E-03 |
| POCP | kg NMVOC eq | 2.85E-03 |
| ADPE | kg Sb eq | 4.69E-06 |
| ADPF | MJ | 1.10E+01 |
| WDP | m ³ depriv. | 4.48E-01 |
| Acronyms | GWP-fossil = Global Warming Potential fossil fuels; GWP-biogenic = Global Warming Potential biogenic; GWP-luluc = Global Warming Potential land use and land use change; ODP = Depletion potential of the stratospheric ozone layer; AP = Acidification potential, Accumulated Exceedance; EP-freshwater = Eutrophication potential, fraction of nutrients reaching freshwater end compartment; EP-marine = Eutrophication potential, fraction of nutrients reaching marine end compartment; EP-terrestrial = Eutrophication potential, Accumulated Exceedance; POCP = Formation potential of tropospheric ozone; ADP-minerals&metals = Abiotic depletion potential for non-fossil resources; ADP-fossil = Abiotic depletion for fossil resources potential; WDP = Water (user) deprivation potential, deprivation-weighted water consumption | |

* Disclaimer: The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator.

The estimated impact results are only relative statements, which do not indicate the endpoints of the impact categories, exceeding threshold values, safety margins and/or risks. The results of the end-of-life stage (modules C1-C4) should be considered when using the results of the product stage (modules A1-A3).

Additional mandatory and voluntary impact category indicators

| Indicator | Unit | A1-A3 |
|----------------------|------------------------|----------|
| GWP-GHG ¹ | kg CO ₂ eq. | 6.72E-01 |

Resource use indicators

| Results for 1 Kg of declared unit | | |
|-----------------------------------|---|----------|
| Indicator | Unit | A1-A3 |
| PERE | MJ | 1.76E+00 |
| PERM | MJ | 0.00E+00 |
| PERT | MJ | 1.76E+00 |
| PENRE | MJ | 1.18E+01 |
| PENRM | MJ | 0.00E+00 |
| PENRT | MJ | 1.18E+01 |
| SM | kg | 2.59E-02 |
| RSF | MJ | 0.00E+00 |
| NRSF | MJ | 0.00E+00 |
| FW- fresh water | m ³ | 1.24E-02 |
| Acronyms | PERE = Use of renewable primary energy excluding renewable primary energy resources used as raw materials; PERM = Use of renewable primary energy resources used as raw materials; PERT = Total use of renewable primary energy resources; PENRE = Use of non-renewable primary energy excluding non-renewable primary energy resources used as raw materials; PENRM = Use of non-renewable primary energy resources used as raw materials; PENRT = Total use of non-renewable primary energy resources; SM = Use of secondary material; RSF = Use of renewable secondary fuels; NRSF = Use of non-renewable secondary fuels; FW = Use of net fresh water | |

Waste indicators

| Results for 1 Kg of declared unit | | |
|-----------------------------------|------|----------|
| Indicator | Unit | A1-A3 |
| Hazardous waste disposed | kg | 1,07E-04 |
| Non-hazardous waste disposed | kg | 2,03E-01 |
| Radioactive waste disposed | kg | 1,58E-05 |

¹ This indicator accounts for all greenhouse gases except biogenic carbon dioxide uptake and emissions and biogenic carbon stored in the product. As such, the indicator is identical to GWP-total except that the CF for biogenic CO₂ is set to zero.

Output flow indicators

| Results for 1 Kg of declared unit | | |
|-----------------------------------|------|----------|
| Indicator | Unit | A1-A3 |
| Components for re-use | kg | 0.00E+00 |
| Material for recycling | kg | 1.32E-02 |
| Materials for energy recovery | kg | 0.00E+00 |
| Exported energy, electricity | MJ | 0.00E+00 |
| Exported energy, thermal | MJ | 0.00E+00 |

Additional LCA results (other environmental performance results of the products)
